SAKURA

HARWARE-SOFTWARE SYSTEM FOR NON-LINEAR (NLS) DIAGNOSTICS METATRON

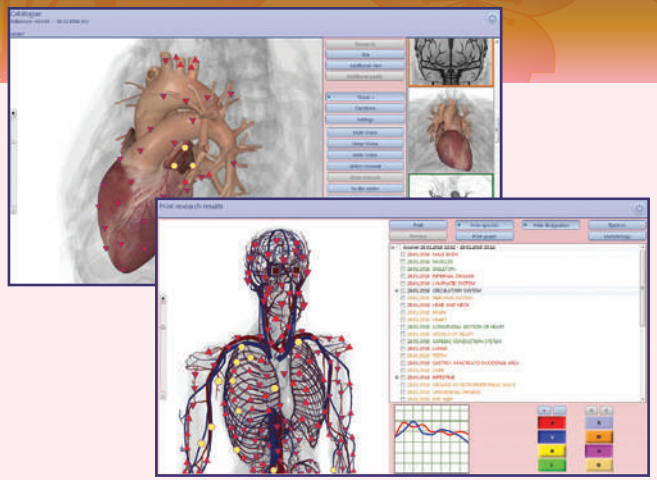
It is a new generation of informational medical diagnostic systems with bio-feedback. Its operation is based on a bioresonance method

• CONTACTLESS • NON-INVASIVE • QUICK

• SAFE AND HIGH-INFORMATIVE METHOD OF AN ORGANISM EXAMINATION

ITS POSSIBILITIES:

– functional evaluation of an organism's functional state in a form of a topical NLS-analysis;
– monitoring of efficiency and results of various therapeutic treatment methods application;
– broad spectrum of research: from functional changes in patients organisms to a level of chromosomal aberrations;
– evaluation of adaptive capabilities of a human;
– identification of a primary nidus of a functional breach;
– evaluation of homeostasis main parameters;
– individual selection of the most efficient medicinal preparations (allopathy, phytopreparations, homeopathy, food supplements, lithotherapy);
– evaluation of stress adequacy during athletics (sportsmen trainings, fitness-centers);
– detection of active pathogenic flora, significant allergens;
– monitoring of rehabilitation process after various illnesses or surgical interventions;
– evaluation of an organism's predisposition to illnesses at a molecular genetic level;
– storing of patients evaluations results in a computer memory in order to monitor dynamics of functional state changes.



ADVANTAGES OF METATRON SYSTEM OVER OTHER DIAGNOSTICS METHODS:

– safety, i.e. maximal non-intervention into internal environment of an organism;
– quickness of a research — average time for a patient research is 15–20 minutes;
– mobility and portability;
– af ordable price of device and therefore the research itself;
– high informativeness of the NLS-method, which is especially important for accurate diagnosing;
– high objectivity at information reading;
– diagnosing and monitoring of pathological conditions at early stages of a disease in the absence of significant organic changes of tissues;
– a possibility of active homeostasis control, which is impossible for any modern diagnostic system.

«SAKURA» — SOFTWARE OF A NEW GENERATION FOR JAPANESE MARKET

In addition to features of the previous versions, new software versions include **a number of new 3D models in Full HD**:

– Internal organs
– Skeleton
– Muscles
– Blood circulatory system
– Lymphatic system
– Nervous system
– Heart
– Cardiac chambers
– Cardiac vessels
– Cardiac conducting system
– Lungs
– Teeth
– External ear
– Chakras

Includes new etalons databases:

– body types
– KAMPO medicinal preparations
– KAMPO phytotherapy
– Japanese food products

PACKAGE OPTIONS OF HARDWARE-SOFTWARE SYSTEMS:

BASIC

MOBILE
