

# KOJIN CO., LTD.

## Type of business

Parts of machines

## Contents of business

Manufacturing of insert molding parts

**Pioneer of insert molding**  
**~from large size to small size~**

**Our company is a specialty maker of insert molding products.**  
**We are glad to deal with trial production and mass production in accordance with every kind of needs from loads on a car to public welfare and industry**

## Character and strong point of the company

Our company is a specialty maker of insert molding products.

Every kind of industrial inverters, control module cases for a servo motor, substrates of power supply and control and cars, module cases for family, sensor cases, molding substrates are our favorite fields.

We manufacture a unique product by making full use of a patent of three-dimensionally insert molding method. Molding products by our creative design and structure of mold, original molding process are contributing to a reduction of value analysis price in various fields like industries, cars and public welfare.

<b>Outline of company</b>		<b>Comments in particular</b>	
◆Year of establishment	Feb.15,1974	◆ISO9001:2015 certification acquired	Aug.15,2017
◆Capital	83.5 million yen		06040-A(certification number)
◆Total employees	146 persons (at Jun.30,2017)	◆ISO14001:2015 certification acquired	Aug.15,2017
◆Yearly turnover	3050million yen (accounting in Jun,2018)		06040-B(certification number)
◆Representative	Masanobu Koshiba, President		
◆Type of business	Manufacturing of electric instruments		

## Primary handling of products

- ① For industrial instruments: power semiconductor cases, resin substrates for bus bar servo with terminal blocks for inverters
- ② For car instruments: brake control cases, sensor cases, power window parts
- ③ For public welfare: resin molding substrates
- ④ Inverter cases for air conditioner
- ⑤ Aluminum construction materials

## Introduction of products

### 1. Terminal blocks with wire conductors

Integral molding terminal blocks with conductors which make it easier for our customers to assemble and decrease the pieces of parts. The shape of products can be changed in accordance with our customers' needs.

### 2. Module cases with terminal blocks

As we have achieved producing a lot of module cases, the shape which is fit for value analysis such as integrated ones with terminal blocks can be produced.

### 3. Cases for electric air conditioners

We deal with the parts for HEV, EV and integral molding products with connector which is a part for cars.

### 4. Substrates of power supply for public welfare

Space saving and Integration with other parts are possible due to insulating high-voltage parts of print substrate by resin with press products.

## Desirable business negotiations

- ◆sales We are glad to comply with a request for custom-made products which are integrated with metallic parts and thermoplastic resin. We are ready to carry out your orders.

## Experience of trade with foreign countries

- ◆Customer countries Malaysia, China and Vietnam

### Dealing with various sizes

- Our company is equipped with vertical molding machines from small size(30t) to large size(260t). We are possible to deal with various insert molding.

### Reducing cost and Saving Space

- Reduction the pieces of car and high-insulation are possible by Integral molding. We will be glad to contribute to cutting cost, saving space and workload reduction.

### Trial and Mass production

- We deal with every consultation including trial production, which range from considering materials of insert parts and electroplating to developing inspection instruments, jigs and tools to check the function.

- ★ Product design and jig design in accordance with our customers' needs in-house. Our company is highly regarded by major automotive parts manufactures and electric appliance maker.

Pioneer of Insert Molding!

Challenge to improve technology and to use our ingenuity in order to meet the need of our customers. We deal with trial production and mass production from large size to small size.
