PINK Japan Announces their continued promotion at the Internecon Show

Tokyo, Japan – Oct 1, 2018 – PINK (www.PINK.de), the global leader in vacuum void-free soldering, today announced that it will be exhibiting at the Internecon Japan show on January 16-18, 2019. Internecon focuses on the high end SMT devices now becoming more and more demanding through use in automotive, medical, aircraft/aerospace and LED lighting applications. This is PINK's 5th year to participate in this show.

PINK's patented VADU technology enables customers to manufacture the highest void-free devices in the world. Void-free is now highly demanded in industries that require zero failure devices and high-power performance in their products. PINK will support the show with their demonstration of the VADU 200, a production tool both manufacturing and developers in providing the highest performance products. The VADU 100, our small footprint, highly flexible small lot and R&D tool, and VADU 300, mass production system, are equally suitable solutions to meet any customer needs.

INTERNEPCON also has market applications that suit PINK's plasma tools and expertise, PINK will also have information on our complete line of plasma systems.

PINK was founded in 1986 by Mr. Friedrich Pink and now is recognized as a global leader in void-free soldering technology. The company is located in Germany and specializes in custom designed vacuum technology. "We provide custom solutions for vacuum soldering, sintering, plasma cleaning and etching, and heating and drying applications which exceed our customer's expectations", said Dale Scholle, PINK Japan President. The range of PINK's markets and applications include: Power Devices (Automotive, Train, Airplane, etc.), Lighting, Medical Devices, Aerospace, etc. They support key applications in, Automotive, LEDs, Medical Sciences. PINK Japan K. K. is a wholly owned subsidiary of PINK GmbH Thermosysteme in German.
