

Rommelag at Interphex 2019 / Company information

## Because every drop counts - the BFS carefree package

Waiblingen, 2019-02-15

At Interphex Rommelag will show how plant operators can relax with bottlpack systems, supplementary inspection machines and tailor-made service packages. With blow-fill-seal technology (BFS) you can achieve three things at once: container production, aseptic filling and closure of the container in one operation under controlled conditions.

### **The perfect combination – BFS aseptic filling systems**

For us it is therefore clear: There is no safer and more cost-efficient solution for packaging liquid and semi-solid pharmaceutical products than a bottlpack aseptic system. In order to ensure that contents can be packed first-class and delivered completely safely to their destination, we have supplemented our bottlpack range with various inspection systems. The systems are convincing throughout the packaging process with maximum safety and cost-effectiveness.

### **Quality assurance in pharmaceutical production for BFS products**

Let yourself be inspired by the different types of equipment and also learn what Rommelag has to offer in terms of quality assurance in pharmaceutical production. Be it in the field of automatic visual inspection, in which we range from simple cosmetic control to additional level monitoring and simple particle detection to highly efficient detection of freely moving foreign bodies. Or, be it in questions of tightness checks or fully automated monitoring of critical product features within in-process control. We have the right solutions for all these cases.

### **Pharma Service, modifications, proactive maintenance**

Rommelag offers the system configuration tailored to the product, supports you with the in-house pharmaceutical service already during the planning phase and provides classic after-sales service from installation of the system by our own technicians to maintenance, repair and complex modifications and retrofits. With attractive service packages, we ensure that the investment in a bottlpack system pays off throughout the entire product life cycle. We prevent unplanned shutdowns and optimize plant performance. Convince yourself and let our service experts advise you.

ABOUT

---

**The Rommelag Group**

An association of independent companies, the Rommelag Group offers packaging technology for the pharma, chemical and food industries. It is divided into the four service areas Rommelag Engineering, Rommelag CMO, Rommelag Flex and Rommelag Service. The Group bundles all product and service portfolios under the umbrella brand ROMMELAG.

Rommelag is the inventor of the Blow-Fill-Seal technology (BFS) and global market leader in the aseptic filling of liquids and semi-solid substances using bottelpack systems. Everything began in 1952 with film extrusion, followed in 1962 by the first prototype of a bottelpack system. Since then, we have continuously refined our know-how regarding plastic packaging solutions. Rommelag now has customers in over 80 countries and employs over 1,800 people.
