Expert in wound healing DAEUN MEDICAL

Professional care for each type of wound

We develop special care for various wound with natural ingredients

DAEUN MEDICAL
EXPERT IN WOUND HEALING

Why do we need Daeun for wound healing?

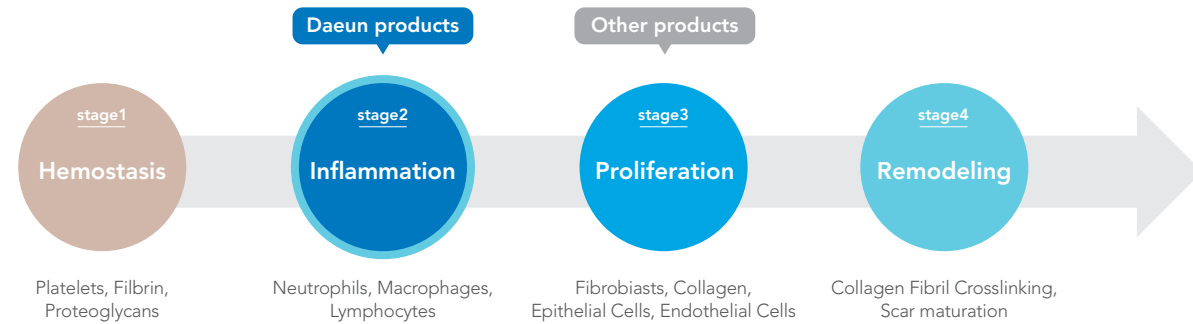

1 New generation of wound dressing

- Wound dressing market had less innovation compared to other medical device markets.
- The most innovative item for the well-known item is Foam Dressing.
- We suggest Gel Dressing as a 3rd generation of dressing.
- Easier application, Perfect for any external and internal part of the body.

2 Special care from earlier stage

Other existing wound care products are for stage 3, Proliferation. But we care from stage 2, Inflammation. The earlier the care, the smaller the scar.

3 100% Natural ingredients

Many scar care or wound care, especially Atopic Dermatitis care products are steroids, which has serious side effects. It's strictly forbidden for long time usage. Unlike these products, our product contains 100% natural ingredient with zero side effect. It's suitable for children even a pregnant woman.

Core Technology

1 Pulling & Binding technology

Glycerol is one of the main ingredients. It's super friendly with water and it has a huge molecule weight. Therefore it works like a high concentration solution in osmotic pressure mechanism with a thin layer it produced between the body fluid. It drags body fluid out of the wound area which contains the virus and various sort of negative substances. And then, tannin acid extracted from various kind of the herb, combines with the negative substances, keeping the wound area hygienic and good condition for healing.

2 Reducing negative substance for wound healing

Virus, Fungus, Bacteria, etc

Various type of negative substances attack our body to infiltrate and infect. DAEUN combines and reduces the number of these negative substances so that the wound can heal in a hygienic condition.

Excessive Protease

Our body produces protease to protect our body from negative substances. But excessive protease resolves Extracellular Matrix as well. DAEUN combines and reduces the number of excessive proteases and protects Extracellular Matrix helping skin regeneration.

Cyclooxygenase

Cyclooxygenase is an enzyme which contributes to pain. DAEUN combines and reduces the number of cyclooxygenase and relieves pain.

Clinical Trial

1 Wound healing clinical trial

	Day 2	Day 5	Day 8
NDA (Daeun Medical)			
Foam dressing			
Control			

2 Burn treatment

Application of plant extracts contained dressing material. (A) The test material was applied when the wound was relatively clean, with thin eschar and scab removed and the dermal layer exposed (29 year old female patient with chemical burn, post burn day #7). (B) Wound was improving state after 3 times application of the test material. (post burn day #14)

3 Scar treatment

Scars after 6 months of mastectomy (Left : control, Right : NDA)
